Overview

Hello and welcome to the 2020 Installation and Licensing guide for Civil Survey Solutions.

There are two main **License Types**:

- **Standalone (including Evaluation, Rental, Home Use and Student)**, and
- **Network**

Note: For both Standalone and Network License Types, the Software must be installed on each client workstation.

About Obtaining a License

When you purchase a Civil Survey Solutions product such as Civil Site Design, Stringer Topo or other Civil Survey Solutions software, you will be issued with a **Serial Key** – this is a unique identification of your product purchase. A valid Serial Key is required in order to authorise your software and obtain a License.

A person at your organisation will be assigned as the Subscription Manager and will be given access to the Civil Survey Solutions Subscription Centre. This is an online portal providing customer access to Serial Key/s, enabling/disabling user access, and generating Home Use Licenses.

The **Civil Survey Solutions Subscription Centre** can be accessed from this link:

www.subscription.civilsurveysolutions.com.au

If you are unsure of the person/s in your organisation with access to the Civil Survey Solutions Subscription Centre, please email us at subscriptions@civilsurveysolutions.com.au or call the Subscription Coordinator on (Australia) 1300 254 004 or (International) +61 3 9544 5250

Minimum System Requirements

Typically, meeting the minimum specifications for the CAD product will meet all system requirements for the software.

64 Bit (x64) Computers

- Windows® 8 Professional edition or Windows 7® (recommended) Enterprise, Ultimate, or Professional edition operating system
- Minimum Intel® Pentium® 4 or AMD Athlon® 64 processor
- 4 GB RAM minimum (8 GB or more recommended)
- 600Mb disk space for installation
- 1360 x 768 true colour video display adapter (1920 x 1080 with true colour recommended; multiple monitors are supported)
- NET Framework Version 4.6

Network licence Server

- Windows 8 or later operating system. Server 2012 or later operating system
- 50Mb disk space for installation
- NET Framework Version 4

Preparing for Installation and Licensing

- Do I need local Admin access during installation?
 - It is strongly recommended during installation and licensing.
 - No, however you would need to open full read/write access to a number of directories and sub-directories – if you would like to pursue this option please [Submit a Support Request](#)
- What permissions do I need to run the software and license?
 - Please see the following for full details:
http://support.civilsurveysolutions.com.au/index.php?/default_import/Knowledgebase/Article/View/86/1/system-requirements---css-products
- Is my machine x64 or x86?
http://support.civilsurveysolutions.com.au/index.php?/default_import/Knowledgebase/Article/View/54/1/is-my-system-64-bit-or-32-bit
- Network or standalone?
 - Check the information/email you received with your Serial Key – the Serial Key is issued to the Subscription Manager at your organisation and can be found in the **Civil Survey Solutions Subscription Centre**:
www.subscription.civilsurveysolutions.com.au
 - No Serial Key?
 - [Submit a Support Request](#)
 - Call the Civil Survey Solutions Subscription Co-ordinator on 1300 254 004 (Australia only), or
 - Email subscriptions@civilsurveysolutions.com.au
 - Unsure if Network or Standalone
 - Contact Civil Survey Solutions Subscription Co-ordinator on 1300 254 004 (Australia only), or
 - Email subscriptions@civilsurveysolutions.com.au
 - Try the serial key as a standalone: it will license if it is a Standalone, otherwise it will inform you that the number is for a Network.
- Is this the latest version of the Software?
 - Click on the **License Activation** command available from the menu/ribbon of the installed application to check the License Version. If it says 2020, then you have installed the latest version.
 - If you do not see a License Activation command then it is likely that you are running a previous version of the software. You may be able to confirm by opening the Welcome Screen in Civil Site Design or opening the About command in Stringer Topo
 - Only V18 or later versions are applicable to this Licensing Guide
 - For older software versions, refer to the [previous licensing guide](#)
 - You can download the latest software updates and Network License Manager from the **Civil Survey Solutions Subscription Centre**:
www.subscription.civilsurveysolutions.com.au
- What happens if I encounter any problems?
 - [Please see the troubleshooting guide at the end of the document](#) – this also describes the process for getting in contact with us so we can help you resolve any issues

Standalone Installation

For standalone licensing, the license file is locked to the machine it is installed on. The standalone license system is installed with the software.

Standalone, Rental, Evaluation, Home-Use and Student licenses are considered as Standalone.

Licenses are stored in a file with the '.lic' extension. They are stored in the following locations:

- Civil Site Design: *C:\ProgramData\CSS\CSD 2020\License*
- Stringer Topo: *C:\ProgramData\CSS\Stringer Topo 2020\License*
- Site Leveller: *C:\ProgramData\CSS\Site Leveller 2020\License*
- Other Application: *C:\ProgramData\CSS\<Civil Survey Solutions Software Name> 2020\License*,
where <Civil Survey Solutions Software Name> is the name of the software installed.

Licenses are stored in a file with the '.lic' extension. They are stored in the following locations with:

Standalone Installation Process

There are two parts to the installation:

- Step 1.** Installing the Software
- Step 2.** Activating the License

Software Download Options

The latest version of the software is available from the following sources:

- Download from the Subscription Centre
Using your **Serial Key** for access, you can download from the **Civil Survey Solutions Subscription Centre**: www.subscription.civilsurveysolutions.com.au

If you do not see a V20 product for download please contact subscriptions@civilsurveysolutions.com.au for assistance.
- Software Download Link
Civil Site Design includes a Welcome Screen, showing both the current version and providing a Download link to display the latest version of the software.

Step 1 - Software Installation

1. Ensure your CAD application is closed. Run the **Software Installation** – during the installation process you may change the default installation path if you wish. This installs both the software and the license manager on the computer.
Note: This has no impact on where or how the licensing is managed.
2. After installation of the Software, start your platform CAD application and note that additional menus/toolbars/ribbons are installed for your installed Civil Survey Solutions software.
Note: Running any CSD, Stringer Topo or Site Leveller command will trigger the license activation form.

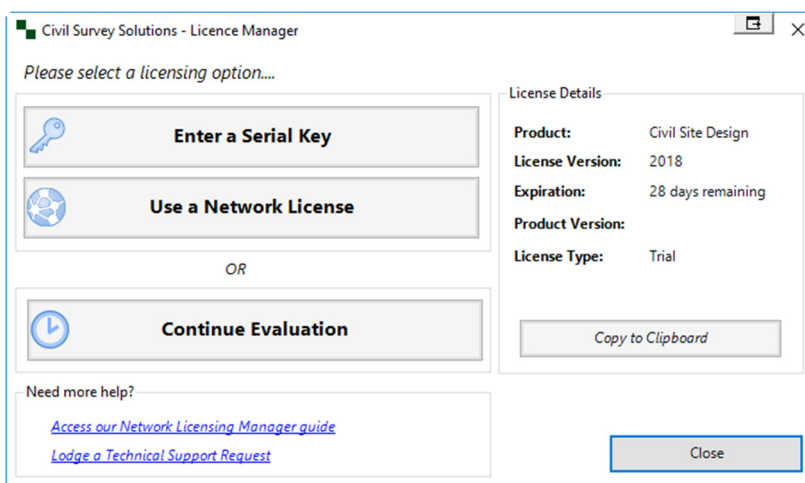

Step 2 – Licensing and Activation

Installations of Civil Survey Solutions Software such as Civil Site Design (CSD) and Stringer Topo (STR) are activated from inside the CAD environment (known as Online License Activation).

*Special Note: You will need to have an internet connection to complete online licensing activation. If you can't obtain an internet connection, please see the **Off Line License Activation** section (below).*

Online License Activation

1. To begin the activation process run any of the product commands, or click on the **License Activation** command. The following screen appears:

Below are the license activation methods for **Evaluation** and **Standalone** (inc. home use and student) customers.

For Evaluation of the Software

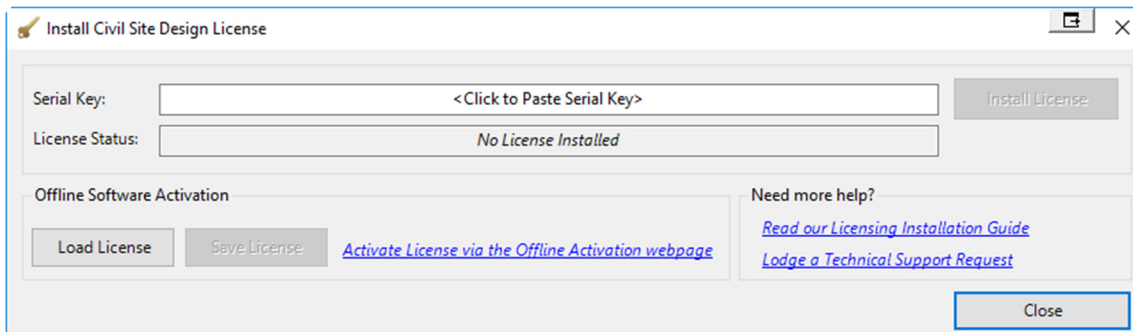

2. To begin your free evaluation period of 30 days, please click **Continue Evaluation**.

Notes:

*Once the 30 day Evaluation Period has expired, you will be required to **Enter a Serial Key** or **Use a Network License** to continue using the Civil Survey Solutions Software.*

For Standalone/Home Use/Student License Activation

2. To activate your Standalone License, click the **Enter a Serial Key** button.
The following form will display:

3. Paste your **Serial Key** (License Key) and then click the **Install License** button on the right (this will become active once your Serial Key is pasted in).

This will activate your license automatically using our online activation service.

Once finished, the **License Status** will change to **License Installed**.

Your software is now licensed.

Note: for a Home Use License or a rental License the License Status will display the license expiry date.

4. Close the screen and run any Civil Survey Solutions application command.

This activates the current version of your Civil Survey Solutions application for use (either permanently or for a set period of time, pending your license type).

License Activation Unsuccessful?

If you receive the error message 'Unable to connect to Authentication Server' when you attempt to license please proceed to the **Standalone Off-Line License Activation** section below

Standalone Off-Line License Activation

This is normally only required if sufficient internet connectivity/access cannot be obtained for the computer on which the software is installed.

There are 3 steps in this process:

Step 1. Attempt Activation and Save the License File

Firstly, follow the normal steps for activation as detailed above (Steps 2 to 3 in the **Online License Activation** section). This will generate a license file locally on your machine and prompt you to save.

On the Install License form, the **Save License** button will become active.

1. Click on the **Save License** and save it to a location that you have write access to.

Step 2. License Authentication from a Remote Computer

Next you activate your serial keys online, and create your license file/s manually. This can be done on any computer with internet access (does not need to be done from the computer you are installing the software on).

1. Go to the web license activation service:
<http://civilsurveysolutions.com.au/index.php/support-and-services/licensing/css-offline-license-activation>

Note: The link 'activate License via the Offline Activation webpage' will take you directly to the offline activation service.

Civil Survey Solutions Software - Offline License Activation

Depending on your office systems environment, it is possible that the online registration process will be unsuccessful. Below is the link for the Offline Activation of your Civil Survey Solutions product - this should be used as per the [Civil Survey Solutions Installation and Activation Guide Installation and Activation Guide](#).

This activation form is not for activation of Autodesk software - please lodge a support request using the menu (left) for licensing support for your Autodesk, or other, software.

Authenticate License File

This web page allows you to authenticate a license file if the computer to be licensed is offline or cannot connect to the authentication service. Select the license file to authenticate, then click the "Authenticate" button to download the authenticated license file. Use your browser's save function to save the authenticated license file. Copy the authenticated license to the original computer and use the "Load License" button to install it.

No file chosen

2. Click on the button **Choose File** and choose the license file you generated in **Step 1. Attempt activation and Save the License File**.
3. Click on **Authenticate** and save the authenticated license file to a location that you have write access to.

Note: do not save directly to the license file location

Step 3. Save the License and Activate

Now that you have an authenticated license file, the last step is to save it to your computer and activate.

1. Ensure that your CAD program is closed
2. Rename the authenticated license file you saved in Step 2 to **CSSStandalone.lic**
3. Save this file to the license file location:
 - For all **V20** version products
 - *C:\ProgramData\CSS\CSD 2020\License, for Civil Site Design or CSD Siteworks*
 - *C:\ProgramData\CSS\Stringer Topo 2020\License, for Stringer Topo*
C:\ProgramData\CSS\Site Leveller 2020\License, for Site Leveller
 - *C:\ProgramData\CSS\<Civil Survey Solutions Software Name> 2020\License,*
where <Civil Survey Solutions Software Name> is the name of the software installed.
4. Restart your CAD package and run any command from the Civil Survey Solutions product you have just installed.

Should you continue to experience issues activating your license, please use this link for licensing support:

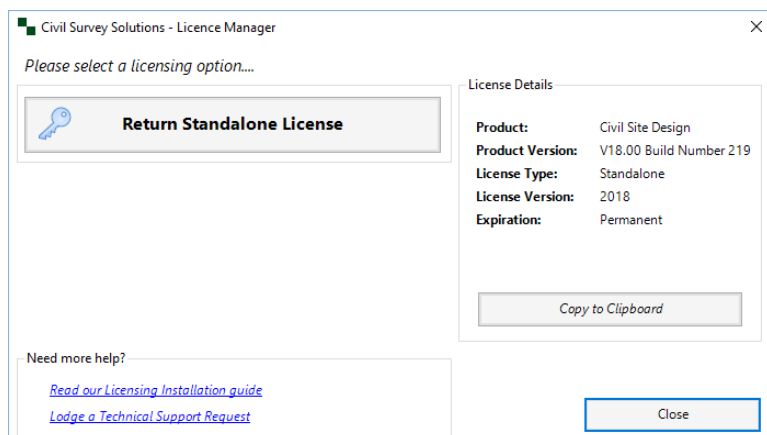

http://support.civilsurveysolutions.com.au/index.php?/default_import/Knowledgebase/Article/View/81/0/license-activation-error-infralution

Deactivating Your Standalone License

You can deactivate your standalone license (Serial Key) from one computer in order to re-activate on a new computer using that same Serial Key (limited to once every 60 days). To return the license:

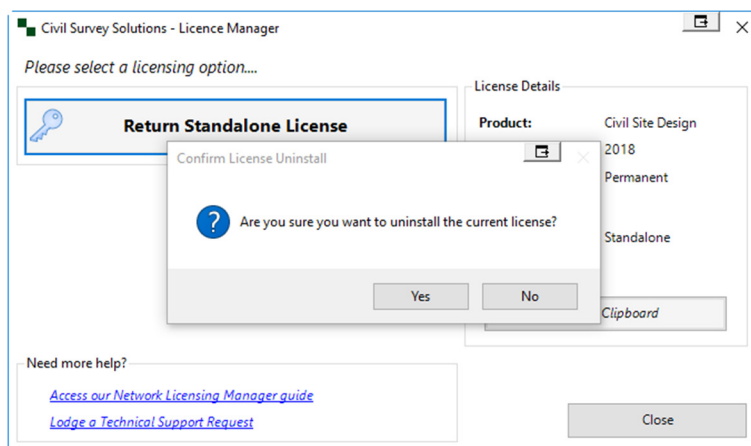

Step 1. Access Licence Activation form

Firstly, run the **Licence Activation** command from your CAD software ribbon or toolbar.

Step 2. License Authentication from a Remote Computer

Click the Return Licence Activation (Deactivate) button to bring up the confirmation message.

Step 3. Confirm Licence return

Click **Yes** to deactivate the licence from the computer.

Note: If you have already deactivated the licence in the last 60 days this process will only deactivate your computer and will not enable activation of the same license on another computer. For additional Licence deactivations/reactivations, please lodge a technical support request:

http://support.civilsurveysolutions.com.au/index.php?/default_import/Tickets/Submit/RenderForm

Step 4. Re-Activate License on new Computer

Install the licence on the new computer using the same Serial Key and instructions as above for Standalone Licensing.

Network Installations

Network licenses are stored centrally on a license server and are administered by the **Civil Survey Solutions Network License Manager**. The Network License Manager will hold and distribute licenses to client machines across your network.

Note: If you are upgrading from a previous network licensed application (installations before 1 June 2017) then you must download and install the latest Civil Survey Solutions License Manager.

The Civil Survey Solutions Network License Manager employs the **Infralution License Management System**. *Note: This is separate software to the Autodesk Network License Manager.*

Educational Network and Commercial Network licenses fall under the banner of Network.

Licenses are stored in a file with the '.lic' extension on the network server, in the following location:

- Network: C:\Program Files (x86)\CSS\Infralution 18+

Network License Manager Download

The Network License manager can be downloaded from the Civil Survey Solutions Subscription Centre, or can be downloaded from here:

<http://www.civilsurveysolutions.com.au/downloads/licensing/CSSInfralutionNetworkLicenseManager2.1.exe>

Network Installation Process

There are 4 parts to a Network installation of the software:

- Step 1.** Install the Civil Survey Solutions Network License Manager on the server computer
- Step 2.** Activate the License/s on the server computer
- Step 3.** License Verification to confirm license status
- Step 4.** Install the Software on each client workstation and link to the Network License Manager on the server computer

Floating network licenses are controlled by the Civil Survey Solutions Network License Manager application. It is important to setup and activate the license/s on the server before performing the client installations.

Before you Start – Firewall Configuration

The Infralution Network License Manager uses the following ports for communication across the network:

- **19396** for Civil Site Design
- **19395** for Stringer Topo
- **19394** for Site Leveller

Call to Action: Ensure that port **19396**, **19395** and **19394** is allowed through your firewall. If you are unsure how to do this please contact your network systems administrator.

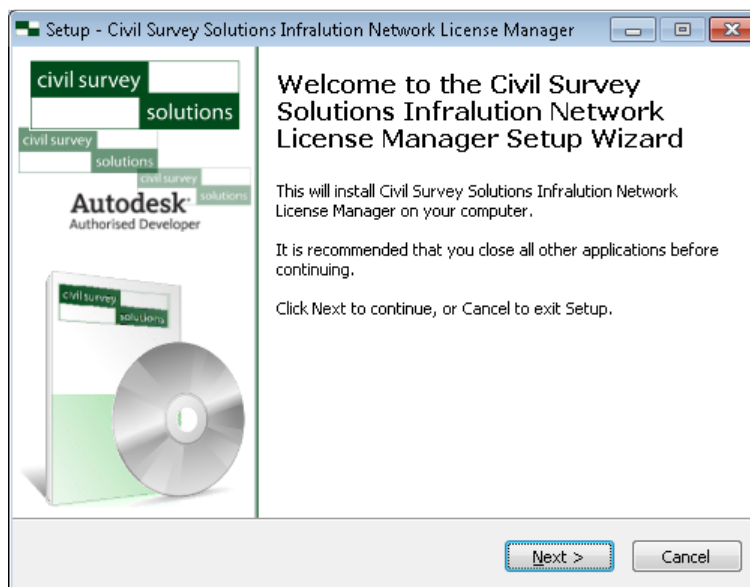

Note: If the required port is not open, you should receive any error message that the machine is actively refusing the connection.

Step 1 – Install the Network License Manager

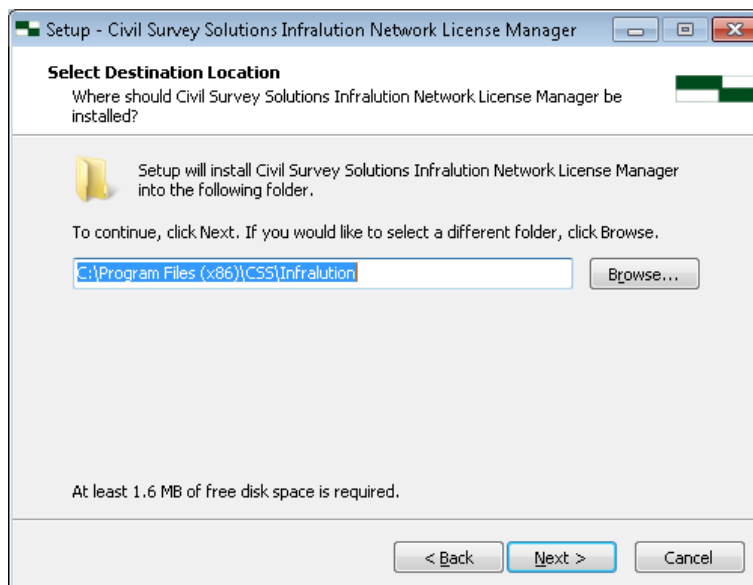

1. Download the latest version of the **Civil Survey Solutions Network License Manager**.

Note: The Network License Manager Installer is available from the following sources:

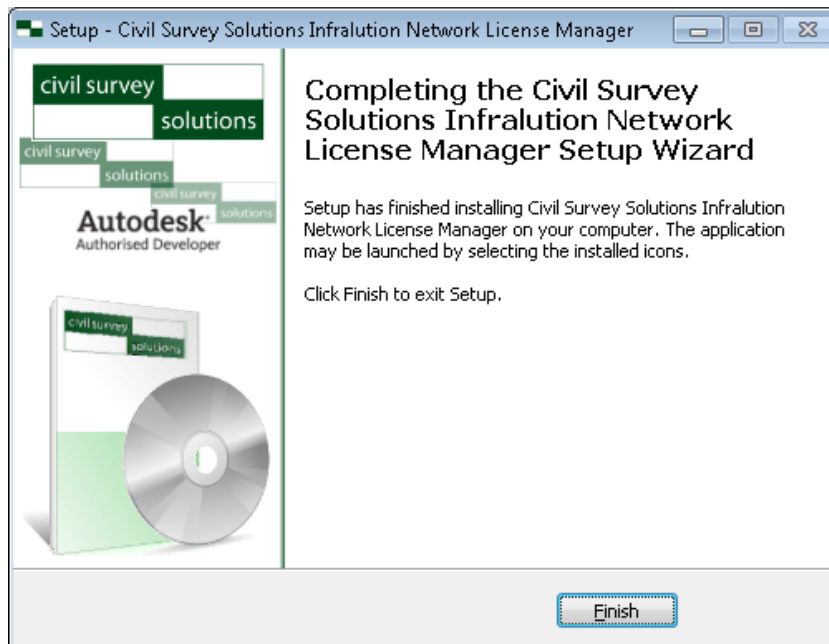

- Download the Network License Manager from the following link:
[Click here for download](#), or
 - Visit the Civil Survey Solutions subscription centre (Licensing Tab) to download:
<http://subscription.civilsurveysolutions.com.au>
2. Install the Civil Survey Solutions Network License Manager onto your Licensing Server.
Upon starting the installation process, the following is displayed:

3. Click Next to continue the installation.

4. Accept the default installation location and click **Next**.

5. A confirmation dialog will display once the installation is complete. Click **Finish**.

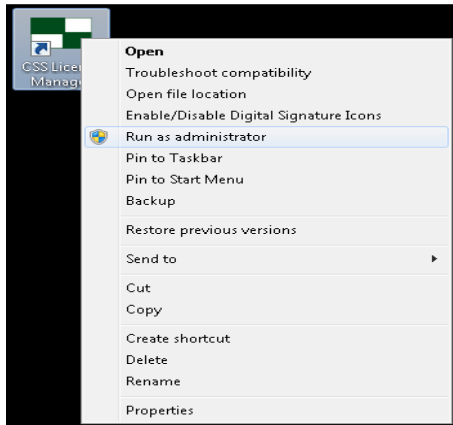

Step 2 – License Activation on the Server

Now that the Network License Manager has been installed onto your server, it is time to activate your license(s).

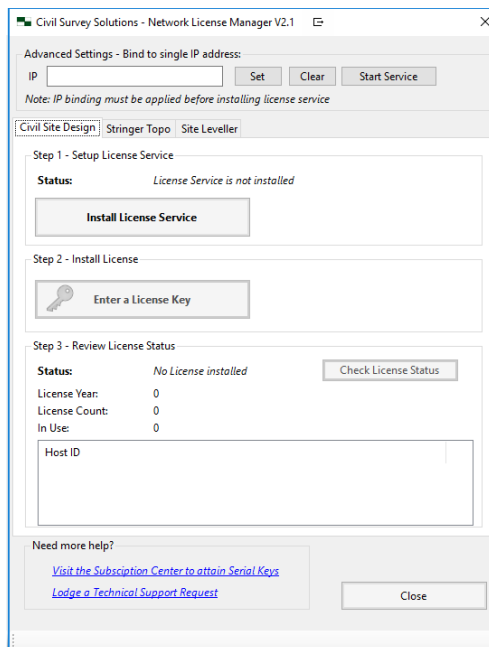

Special Note: You will need to have an internet connection to complete online licensing activation. If you can't obtain an internet connection for the machine that you've installed the software on and require an off line license activation, please see refer to 'Network Off Line License Activation' below.

The **Civil Survey Solutions Infralution Network License Manager** is managed via a small utility program that has a shortcut placed onto the desktop during installation. The shortcut is named **CSS License Manager**.

1. Right click the **CSS License Manager** desktop shortcut and click **Run as administrator**
Special Note: Please do not skip this step as it is critical to successful licensing activation.

The following form will display:

2. In the **CSS Network License Manager**, click the tab of the product you wish to install.

Each tab is broken down into 3 steps:

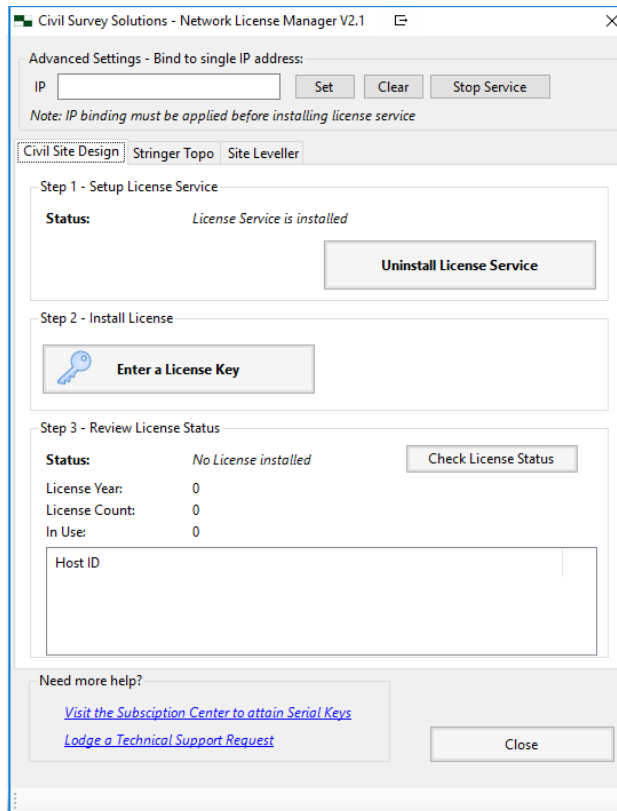

- **Install License Service:** Creates the license service, which is required for administering the licenses. This supports license activation and ongoing license management.
Note: You must be running as an administrator to install the service.
- **Enter a Serial Key:** Used to activate your licenses and add them to your license pool
- **Check License Status:** Allows you to check the status of your licenses – how many are available and number in use

There is also an advanced setting section where you can bind the IP address that the network licence manager returns the licences on. See **Appendix 3 – Set Network licence manger IP address Binding for more information.*

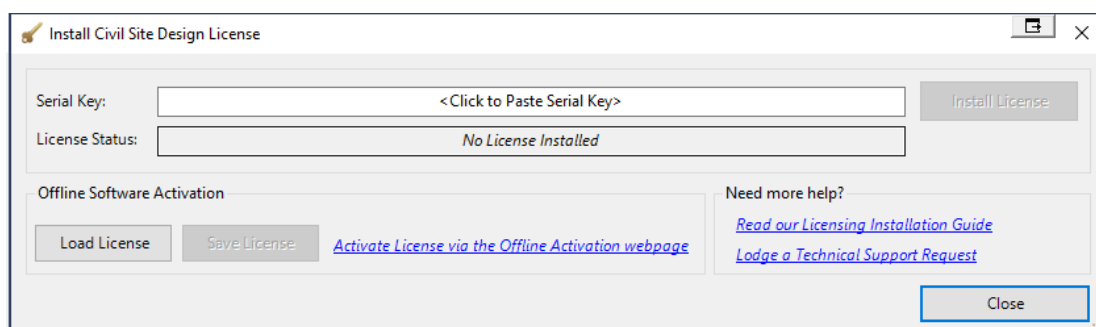

- Click on **Install License Service** for your Civil Survey Solutions product.

On success:

- The **Install License Service** button will be hidden
- The **Uninstall Licence Service** button will display to enable removal of the service, and
- The **Enter Serial Key** button will be enabled.

- Click the **Enter Serial Key** button.

- Enter or paste your **Serial Key** (License Key) and then click the **Install License** button on the right (this will become active once your Serial Key is pasted in).

This will activate your license/s using our online activation service. Once finished, the **License Status** will change to **License Installed**.

- Close the screen to return to the Network License Manager to confirm availability of licenses for distribution.

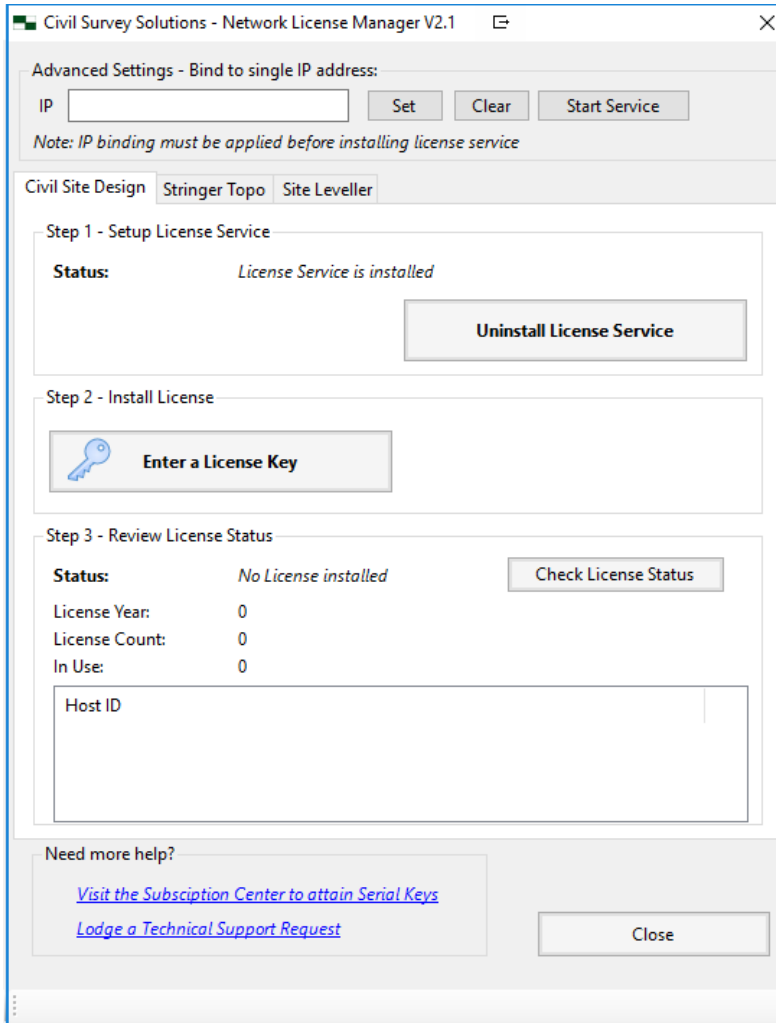

Go to the **Step 3 – License Verification**.

License Activation Unsuccessful?

If you receive the error message 'Unable to connect to Authentication Server' or similar when you attempt to license please proceed to the **Network Off-Line License Activation** section below

Step 3 - License Verification

1. Verify the license/s is/are installed correctly by clicking the **Check License Status** button.

The screenshot shows the 'Civil Survey Solutions - Network License Manager V2.1' window. At the top, there's a section for 'Advanced Settings - Bind to single IP address:' with an IP input field, 'Set', 'Clear', and 'Start Service' buttons. A note below states: 'Note: IP binding must be applied before installing license service'. Below this are tabs for 'Civil Site Design', 'Stringer Topo', and 'Site Leveller'. The main area is divided into three steps: 'Step 1 - Setup License Service' with a status 'License Service is installed' and an 'Uninstall License Service' button; 'Step 2 - Install License' with a key icon and an 'Enter a License Key' button; and 'Step 3 - Review License Status' which is currently active. In Step 3, the status is 'No License installed', and there are fields for 'License Year: 0', 'License Count: 0', and 'In Use: 0'. A 'Check License Status' button is present. Below these fields is a 'Host ID' input field. At the bottom, there's a 'Need more help?' section with links to 'Visit the Subscription Center to attain Serial Keys' and 'Lodge a Technical Support Request', and a 'Close' button.

This will display if the licence is installed, what year the licences are for, how many licences are available, how many licences are in use and which users are currently using the application.

Once you confirm that the license server is up and running with available license/s, it's time to install on the client workstations.

Network Off-Line License Activation

These steps are normally only required if internet connection to the online licensing service cannot be achieved using the **Network Online License Activation** steps above. If the error message 'Unable to connect to Authentication Server' displays when you attempt to license then the below license activation method can be used.

Attempt Activation and Save the License File

Firstly, follow the normal steps for network online license activation as detailed above (in the **Network Online License Activation** section). If the license activation fails, a message to this effect will display.

Upon license failure, a license activation file is created locally on your machine the **Save License** prompt will be active.

1. Select **Save License** and save it to a location that you have write access to

Obtain License Authentication from a Remote Computer

Next you activate your serial key/s online, and create your license file/s manually. This can be done on any computer with internet access (does not need to be done from the computer you are installing the software on).

1. Go to:
<http://www.civilsurveysolutions.com.au/index.php/support-and-services/licensing/css-offline-license-activation>

Note: The link 'Activate License via the Offline Activation webpage' will take you directly to the offline activation service

Civil Survey Solutions Software - Offline License Activation

Depending on your office systems environment, it is possible that the online registration process will be unsuccessful. Below is the link for the Offline Activation of your Civil Survey Solutions product - this should be used as per the [Civil Survey Solutions Installation and Activation Guide](#).

This activation form is not for activation of Autodesk software - please lodge a support request using the menu (left) for licensing support for your Autodesk, or other, software.

Authenticate License File

This web page allows you to authenticate a license file if the computer to be licensed is offline or cannot connect to the authentication service. Select the license file to authenticate, then click the "Authenticate" button to download the authenticated license file. Use your browser's save function to save the authenticated license file. Copy the authenticated license to the original computer and use the "Load License" button to install it.

No file chosen

2. Click on the button **Choose File** and choose the license file you generated in **1. Attempt activation and Save the License File**.

3. Click on **Authenticate** and save the authenticated license file to a location that you have write access to.

Note: you cannot save directly to the normal license file location, as access will typically be denied by Windows. Save the file to any location on your computer.

Save the License to the Server and Activate

Now that you have an authenticated license file, the last step is to save it to your computer and activate.

1. Rename the file to:
 - a. **CSD.lic** for Civil Site Design
 - b. **STR.lic** for Stringer Topo, or
 - c. **SL.lic** for Site Leveller.
2. Copy/Move/Save the file to the license file location:
 - C:\Program Files (x86)\CSS\Infralution 18+

License activation is complete. Please refer to **Step 3 – License Verification**.

Step 4 – Client Workstation Installation and Licensing

Please Note: The Software Installation process on the client workstation is the same for both Standalone and Network license types.

This process is applied for each workstation being connected to the network license for the required Civil Survey Solutions application.

Client Workstation Software Installation

The latest version for **Software Installation** is available from the following sources:

- Download from the Subscription Centre
Using your **Serial Key** for access, you can download from the **Civil Survey Solutions Subscription Centre**: www.subscription.civilsurveysolutions.com.au

If you do not see a V20 product for download please contact subscriptions@civilsurveysolutions.com.au for assistance.

- Software Download Link
Civil Site Design includes a Welcome Screen, showing both the current version and providing a Download link to display the latest version of the software.

Before you Start – Firewall Configuration on the Client Workstation

The Infralution Network License Manager uses the following ports for communication across the network:

- **19396** for Civil Site Design
- **19395** for Stringer Topo
- **19394** for Site Leveller

The relevant port/s must be open on each client workstation (and the server) in order for licensing to be established and maintained.

Note: If the required port is not open, you should receive any error message that the machine is actively refusing the connection.

Call to Action: Ensure that port **19396**, **19395** and **19394** is allowed through your firewall. If you are unsure how to do this please contact your network systems administrator.

Client Workstation Software Installation and Network License Connection

The software installation includes Standalone licensing and Network License connection capabilities.

*Note: Deployment options are available as part of the software installation – please see **Appendix 1***

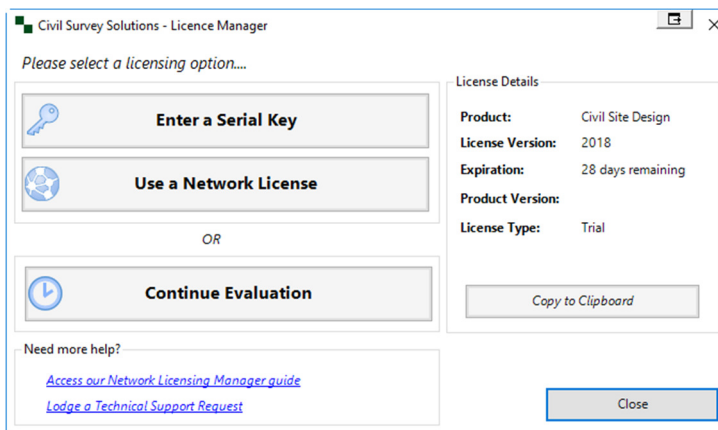

Software Installation on the Workstation

1. Ensure your CAD application is closed. Run the **Software** to install the software on the computer.

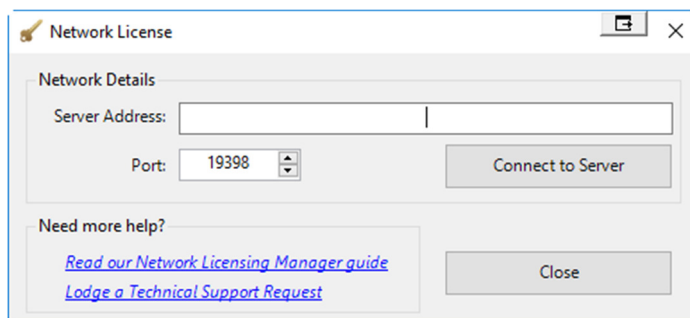

Note: The software installation includes Standalone licensing and Network License connection capabilities. This has no impact on where or how the Network License is managed.

Network License Connection

1. After installation of the Software, restart your platform CAD application and note that additional menus/toolbars/ribbons are installed for your installed Civil Survey Solutions software.
2. Start any of the product commands to begin the activation process, or click on the **License Activation** command. The following screen will appear

3. Click the **Use Network License** button. The following form will display:

4. Enter the name or IP address of your Server in the Server Address field.
Note: By default the port should be 19396 for Civil Site Design, 19395 for Stringer Topo and 19394 for Site Leveller.
5. Click **Connect to Server** to access the network licenses of Civil Site Design via the server.
6. Click on **Close** to exit the form.
7. In the License Details, License Type should report **Network**.
8. Close the License Manager to continue using the software

The client workstation is now accessing the license manager on the server.

Need Network Licensing Assistance?

Should you encounter any errors during installation or licensing, please use the following link for support or review the Troubleshooting section for tips on overcoming common licensing errors:

http://support.civilsurveysolutions.com.au/index.php?/default_import/Knowledgebase/Article/View/81/0/license-activation-error-infralution

Troubleshooting

1. When I try to activate the license, I get a message that I've exceeded my authorisation limit
 - Please contact us via the support system to request an additional activation:
<http://support.civilsurveysolutions.com.au>
 - If using a standalone licence, please try returning the licence from the old computer and try again.
2. I receive the following error when a workstation is trying to access the license server:
'Licensing Error: An error occurred while verifying you license: Error: Invalid URI: Invalid port specified...'
 - Confirm that the License Server is running
 - Confirm that the correct Port is open (see below for port details)
 - There is an issue with IPv6 networks. The IPv6 network needs to be disabled for each workstation. See **Appendix 2** (below) for details on how to do this
3. I received an error while activating my license, what now?
 - http://support.civilsurveysolutions.com.au/index.php?/default_import/Knowledgebase/Article/View/81/0/license-activation-error-infralution
4. The network server is showing the licenses are there, but the clients can't reach them
 - Infralution uses TCP ports 19396, 19395 and 19394 to communicate within the LAN environment, please ensure you open these up on your Firewall.
 - These ports must be open on BOTH the network server AND the client workstations
5. I received an error saying unable to connect to Authentication Server:
 - Steps for addressing this are outlined in the above guide
 - http://support.civilsurveysolutions.com.au/index.php?/default_import/Knowledgebase/Article/View/82/1/unable-to-contact-authentication-server
6. I can't find the software you're asking me to install
 - All software mentioned in this guide is also available to our subscription customers
 - Please log in using your Civil Survey Solutions Subscription Centre login details:
 - <http://www.subscription.civilsurveysolutions.com.au>
7. Please visit the Civil Survey Solutions Subscription Site for the latest updates and downloads
 - Please log in using your Civil Survey Solutions Subscription Centre login details:
 - <http://www.subscription.civilsurveysolutions.com.au>
8. Behind a proxy Server
 - If you are behind a proxy server and have previously had issues activating your licence with our automatic system, please note that we have made changes this year to improve this system and you should now be able to get a licence.
- If you have network licences, make sure you are running the latest version of the CSS Network License manager:
 - <http://www.civilsurveysolutions.com.au/downloads/licensing/CSSInfralutionNetworkLicenseManager2.1.exe>
 - Please log in using your Civil Survey Solutions Subscription Centre login details:
 - <http://www.subscription.civilsurveysolutions.com.au>
- Stuck? Lodge a ticket online using our Support System if your issue isn't covered by this installation guide
 - <http://support.civilsurveysolutions.com.au>

Appendix

Appendix 1: Software Deployment Options

This is recommended for experienced system administrators.

1. Run the **Software Installation** with the following parameters:
 - /SILENT –server <server name>
(eg: CSDV2000forC3D2020-Setup.exe/**SILENT –server Server1**
where **Server1** is the name of the license server)
 - For **CSD** you will also need to include the follow where 20xx is the CAD platform you wish to install on. /TASKS=Platform/20xx
 - *CSD example for C3D 2020:*
 - CSDV2000forC3D2020-Setup.exe /**SILENT –server Server1**
/TASKS=Platform/2020
 - *STR Topo example for C3D 2020:*
 - Stringer_Topo_V20.01_for_C3D_x64.exe /**SILENT –server Server1**
/TASKS=Platform/2020_Metric
 - You can combine Tasks together by having a ; between the tasks e.g.
/TASKS=Platform/2020; Platform/2018
2. After installation of the Software, start your platform CAD application and note that additional menus/toolbars/ribbons are installed for Civil Site Design. Run any ARD command – licensing will automatically be administered from the license server.

For a full list of deployment tasks, please see our knowledgebase article:

http://support.civilsurveysolutions.com.au/index.php?/default_import/Knowledgebase/Article/View/181/1/software-deployment-options

Appendix 2 – Disabling IPv6 Networks

- Windows 7 and Vista
 - From the **Start** menu, select **Control Panel**. Make sure you are in the Large or Small icons view (Windows 7), or Classic View (Vista).
 - Open **Network and Sharing Center**.
 - On the left, select **Change adapter settings** (Windows 7) or **Manage network connections** (Vista).
 - Right-click the connection for which you want to disable IPv6, and select **Properties**.
 - Uncheck **Internet Protocol Version 6 (TCP/IPv6)** and click **OK**.
- Windows 8 and 10 – refer to this link to download
 - <https://support.microsoft.com/en-us/help/929852/how-to-disable-ipv6-or-its-components-in-windows>

Appendix 3 – Set Network licence manger IP address Binding

The IP binding is only applied if the licence service has not been installed or is currently stopped.

1. Run click the **CSS License Manager** desktop shortcut.
2. Under Advanced Settings enter an **IP** address that you want the license manager to be bound on.
3. Click **Set**.
 - If you have already installed the licence service, click the **Stop Service** button. Then click **Start Service**.
 - If you have not installed the licence services, go do that now. **Step 2 – License Activation on the Server**

**Please note that when setting a binding IP address, you must restart the CSS Network license manger to see the in-use license's.*
